

Countdown to VISION 2024 - Topics & Tickets

Visit IDS at VISION in Stuttgart, Germany, at booth 8C60

New and further developments in all product lines, numerous demo systems and, of course, plenty of technical input and opportunity for exchange: from 8 to 10 October, the Stuttgart Trade Fair Centre will once again be dedicated to image processing, and IDS will naturally play a key role. At VISION, we will once again prove that there is no way around us as the pacemaker for modern image processing.

Our highlights at the trade fair include a 2D camera with an event-based sensor, a completely new camera category for monitoring applications and a prototype of a cost-effective time-of-flight 3D camera. In addition, we will be presenting Ensenso B, the latest member of the Ensenso camera series. And at our stand, you can also find out how DENKnet and its high-performance OCR model can reliably recognise characters even under difficult conditions.

Our new event landing page offers you the opportunity to get a first impression of our product range and the event programme. You can also obtain a code to request your free day ticket.

We look forward to welcoming you to our stand. For those who are unable to attend the trade fair or who would like to revisit the highlights at their leisure, we will be offering a video tour of the booth on the Vision Channel from 10 October.
